- Q-tips
- Adhesive bandages
- Antibiotic ointment (if allowed)
- Mints (if allowed)
- Glucose tablets
- Gauze
- Paper tape
- Feminine hygiene products
- Alcohol prep pads
- Treasure chest for teeth

## **TIPS FOR SETTING UP AN ISOLATION ROOM**

- Stock the sink area with soap and paper towels.
- Have hand sanitizer near the point of care and the room door.
- Ensure adequate room ventilation
- Post signs on the door indicating that the space is an isolation area.
- Ensure that visitors consult the healthcare worker in charge before being allowed into the isolation areas. Keep a roster of all staff working in the isolation areas, for possible outbreak investigation and contact tracing.
- Remove all non-essential furniture and ensure that the remaining furniture is easy to clean.
- Use a rolling cart or cabinet to stock PPE and infection control supplies outside the isolation room.
- Keep the patient's personal belongings to a minimum. Keep drinking water, cups, tissue wipes, and all items necessary for attending to personal hygiene, within the patient's reach.
- Thoroughly clean and disinfect patient-care equipment that is required for use by other patients before use.
- Place an appropriate container with a lid outside the door for equipment/clothing that requires disinfection or sterilization.
- Keep equipment and supplies required for cleaning or disinfection inside the isolation room or area, and perform a daily deep clean daily of the isolation room or area.
- Set up a telephone or other method of communication (walkie-talkie, etc.) in the isolation room to reduce the number of times the workers need to don PPE to enter the room or area.

Take a look at our PPE Catalog for more items.
