

5 Ways

New Technology Can Improve Vision Screening at Your School

Managing annual vision screenings in your school can be a daunting task. Juggling schedules and training volunteers while ensuring your students receive a comprehensive and accurate screening comes with its challenges.

Here are the Top 5 ways Spot Vision Screener can help improve vision screenings at your school.

1

It's fast and comprehensive

Annual vision screenings take valuable time away from students and teachers while scheduling can be difficult across a range of grades. With Spot Vision Screener, one school reduced screening time from **3 days to 5 hours**. It takes just seconds to screen both eyes for **six vision risk factors**.

Amblyopic Risk Factors

Myopia

(nearsightedness)

Hyperopia

(farsightedness)

Astigmatism

(blurred vision)

Anisometropia

(unequal refractive power)

Strabismus

(eye misalignment)

Anisocoria

(unequal pupil size)

2

It's easy to use

Chart-based screenings require a well-trained screener to feel confident in the results. Spot Vision Screener guides the screener while requiring minimal cooperation from the child and captures definitive results **97% of the time**.

I can train 5 volunteers in under 5 minutes. Once you get Spot in someone's hands, they pick it up quickly.

Chelsea Elliott,
half Helen Foundation, Executive Director

3

It goes wherever you need it to

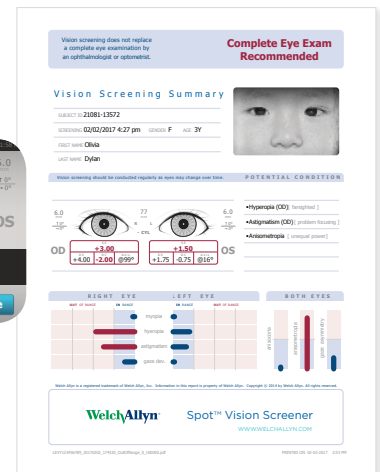

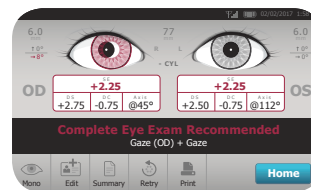

Securing a space and setting up a chart-based screening can be challenging. Spot Vision Screener is **hand-held and portable** which allows you to be flexible and screen whenever and wherever.

4

Results are instant and easy to communicate

Recording results and preparing follow-up are arguably the most important and time-consuming parts of a school screening. Spot Vision Screener screens for six vision risk factors and will display “Complete Eye Exam Recommended” or “All Measurements in Range” instantaneously. **Results are stored and easy to mass export**, while our one-page Vision Screening Summary **reports are intuitive** and help promote follow-up care to parents and guardians.

5

It's time to experience that 'wow' moment

Turn a tedious task into a fun experience for screeners and students. Spot Vision Screener uses lights and chirping sounds to keep children engaged. And because the device captures a reading in seconds, you'll keep the line moving quickly so students and teachers can get back to the classroom.

In past years I alone screened students; it took four months! The Spot is fantastic—in just three days with the support of the Oregon LIONS, we screened 1,152 children including those with special needs.
